

## Trust Nothing Architecture™

### SECURE CLOUD

CHAaSM's security first approach to the cloud will allow you to deploy a custom high-governance accredited cloud in minutes.

### SOFTWARE FACTORY

CHAaSM's automated software factory provides the capability to deliver over 60 CNCF projects hardened by our trade secret build and installation framework.

### Trust Nothing™

CHAaSM provides decades of experience implementing a "trust nothing" approach to give customers control of the security of their hybrid cloud strategy. We empower customers with the ability to address zero-day threats immediately, and maintain cyber resilience over the lifetime of their hybrid cloud deployments.

Rapidly build new micro-services with embedded automation for inter-service interoperability

Rapidly package and deploy for software updates and zero day elimination

Automatically correct configuration errors

Self-healing STIGs and security baselines

Hardware and software cryptographic security

Automated threat profiling of open source applications

CHAaSM build's and deploy's security first infrastructure to protect against cyber threats, breaches and data exfiltration. With the Internet of Threats (IoT) today, responsible software consumption is the only option, and the Trust Nothing™ stance is necessary. CHAaSM's software helps you take control of your development environment, server architecture, and cloud. By securing your OS/Kernel and Application services, CHAaSM allows for responsible deployment of 100G Cloud Environments for IoT, AI, and Analytics.
